Question

Per our discussion the other day, I would like to request whatever natural resource data are available in digital format that were used in compiling and analyzing land and natural resource issues in the PG&E Hydro DEIR. The DEIR presents substantial amounts of information on land and natural resources in text and tabular form. Presumably, this information is also part of a GIS data system. We would like a digital copy of this information.

More specifically, we would like the information pertaining to forestry, terrestrial biology, fisheries, recreation, cultural resources, agriculture, transportation, aesthetics and geology/soils. We are most interested in the inventory data, but would also accept any modeling work that is available for distribution.

As I described, the agencies are compiling a database of the PG&E lands that would be used to guide decision making should the lands become available for government ownership or management. We have already input the PG&E data on property and major facilities made available early this year. We have matched this data with existing state and federal data on natural resources. We would like to further refine our inventory and analysis work by tapping the data presented in the DEIR.

Response

Enclosed with this response are the GIS data files that can be publicly distributed. Those files are listed below.

Please note there are files that the Aspen team cannot publicly distribute.
